Foliage: evergreen palm, massive smooth trunk and large silvery-green leaves.

Flowers / Fruits: small, maroon and yellow flowers in spring and woody, yellow fruits in autumn.

Site: sun

Soil: acidic to alkaline, well-drained soil.

Irrigation: regular

Hardiness: hardy -15 / 18°C

Long description: This unique Chilean palm is one of the hardiest feather palms in the world. Although it is a very slow growing palm, thru the ages it will form a massive, but very smooth trunk. Fruits of Jubaea contain coconut-like nuts, which can be eaten. Without a doubt this is one of Patagonia's most remarkable palms.

For more information on our full Jubaea range, click [here!](#) Information on different sizes etc, please click [here](#).

Our Jubaeas are directly imported from Chile, South America.
