### Fascicularia bicolor

**Common name:** Puñeñe, Sun Bromeliad **Height:** 1m **Growing:** slow **Foliage:** evergreen

**Flowers / Fruits:** tiny blue purple flowers

**Site:** sun to partial shade

**Soil:** acidic to slightly alkaline, well-drained soil.

**Irrigation:** abundant

**Hardiness:** semi-hardy -5°C

**Long description:** Unique Bromeliad, also known as Sun Bromilead. The bicolor has a fiery bright autumn color. The scarlet flushed leaves together with the hearth of turquoise flowers will have dazzling effect, which will catch anyone's attention. Be careful, the beauty of this plant is protected by a sharp and spiky leave edge! Flowering usually takes place in early autumn. During this time the color of leaves also turns from green into a bright fiery color. The turquoise flowers are only present for a short period of time. However, the glowing red richness of the leaves will stay until spring!
