Chusquea cumingii

Common name: colihüe, small quila,

Height: 2m

Growing: medium

Foliage: evergreen. blueish, short-pointed leaves.

Flowers / Fruits: n/a

Site: sun to partial shade

Soil: acidic to slightly alkaline

Irrigation: regular

Hardiness: hardy -15°C

Long description: Chusquea cumingii is a clumping bamboo with arching culms and slightly clambering, glaucous leaves. Chusquea cumingii can grow new culms from the nodes of existing culms as well as from the root. Probably one of the shortest varieties of Chusquea.
